

### **Bugs Fixed in the app.py file:**

1. Accepted GET and POST method in app.route().
2. Used IF statement to make the code of request POST to run or render the home.html.
3. Changed request.args() to request.form() because it is a POST method.

### **Bugs Fixed in the html file:**

1. Add method = post argument to the form to send POST request on button click.
